

SARCODES

The Hidden Gems of Homeopathic Medicine

A Comprehensive Guide
to Homeopathic Healing
with Organotherapy

Jerry Van den Bosch
Globuli & Granuli

Emryss

Approach this book and its content with an open mind, as doing so it can lead to remarkable outcomes in your clinical practice. The outcomes observed stand as evidence of the effectiveness of these methods.

Initially, I needed firsthand experience to be convinced, but now allow me to guide you on a journey that will illustrate the effectiveness of these sarcodes.

'Jerry'

FOREWORD

It is with great pleasure that I have the privilege to write this foreword for the latest work of Jerry Van den Bosch, a classical homeopath whose expertise and dedication to homeopathy have been a source of inspiration for me.

In this book, Jerry Van den Bosch has made a valuable contribution to the understanding of Organotherapy within the homeopathic practice. His profound knowledge and years of experience are clearly evident in the clear and accessible manner in which he shares his insights.

Organotherapy, an approach that focuses on the use of organs and tissues of animal or human origin, is a fascinating aspect of homeopathy that is often insufficiently explored. Van den Bosch takes the reader on a journey through this complex yet extremely captivating field, conveying his profound knowledge in an understandable manner.

This book will not only be a valuable asset for experienced homeopaths looking to enrich their practice with organotherapy but also for students and enthusiasts seeking to deepen their understanding of homeopathy. It is an essential reference work that bridges the gap between traditional and modern approaches within homeopathy.

I congratulate Jerry Van den Bosch on this magnificent work and am confident that it will be a source of inspiration for many striving for a deeper understanding of homeopathy and its applications.

INTRODUCTION

1

Why did I write this book?

In my daily practice, I often found myself searching for 'The Missing Link' in some cases.

You are certain that your constitutional remedy is correct. You have tried multiple potencies, even administered a nosode, but your chosen remedy remains ineffective. During my education, I was often told that the whole picture had to fit, with a focus on the mental picture and generalities, following a more or less Kentian approach. One remedy that fits all. So, there had to be another way, a complementary approach.

One day I discovered that . . .

The French School often works with homeopathic remedies made from healthy tissue and gland extracts called Sarcodes, which were barely covered or not covered at all in my education.

After studying and testing some of these remedies and their corresponding potencies for years, I came to surprising conclusions. What we often think of as clinical prescribing is not necessarily so clinical at all.

Without a doubt, it can be more suitable than any other remedy at times.

INTRODUCTION

2

A d i f f e r e n t p e r s p e c t i v e

If you find yourself in a challenging case, this book can provide you with an alternative viewpoint on how to address it, offering a complementary approach. It has the potential to reshape your approach to case management.

This book does not intend to undermine classical homeopathy, to which I will always remain faithful. Rather, it aims to provide a complementary and broader perspective in solving cases. While focusing on the overall picture is important, there are instances where the mental image or the chief complaint is the underlying cause of an underlying suffering, which can often be effectively addressed through "Organotherapy."

This book is dedicated to the late Dr. Maurice Dupuis from Kluisbergen (Belgium), to ignite the homeopathic spark, and to the late Classical Homeopath René Smet from Turnhout (Belgium).

HISTORY

of Organotherapy

4

Hidden knowledge . . .

Organotherapy is a method that can be traced back to Hippocrates, Dioscorides, and further developed by individuals such as Lux ("Isopathy of Contagia from 1833"), Gross, Hermann, Hering, Burnett, Nebel, Tetau, Bergeret, to name a few. However, in my education, I received little to no proper information about it. In France, they frequently use organotherapy (sarcodes). The lack of knowledge about this method in other countries may be due to the language barrier, specifically the French language.

Nevertheless, in this book, I won't delve too much into the history, there are other books for that. But it's important to know some of the names so you can find more information about them in existing literature.

This book is primarily a practical workbook that can be used in the field. It provides useful information based on years of experience by French homeopaths, rather than presenting useless theories.

I often use many of these remedies in my own practice. Have I personally used all the remedies in this book? No not yet, simply because the opportunity may not have presented itself yet. However, I have gained a lot of experience and seen marvelous results, which have convinced me that they do work. In cases where you find yourself stuck and unsure of what to do, organotherapy may be helpful. It offers a different perspective on the case.

HISTORY

The French School

5

Here is a concise historical overview of the individuals who have inspired me the most regarding the French School.

Leon Vannier 1880-1963

He built upon the work of Dr. A. Nebel from Lausanne (1870-1954). Vannier was the first homeopath in France to apply drainage within homeopathy.

Henri Voisin 1896-1975

One of France's finest homeopaths, he trained hundreds of homeopaths at his school, the "école d'Annecy."

Max Tétau 1927-2012

He served as the president of the Medical Society of Biotherapy and the National Federation of Societies of Homeopathic Medicine.

M. Fortier Bernoville 1896-1939

He was a student and colleague of Dr. Vannier, who wrote about organ drainage. He was also a colleague of Jean and Henri Boiron, who later founded Boiron.

Claude Bergeret 1932 -1993

Together with Dr. Tétau, he authored several books, including "L'organothérapie diluée et dynamisée" in 1971.

Jean Lionel Bagot 1957- ...

He is an oncologist at the University Hospital of Strasbourg. As a physician-homeopath, he offers homeopathy primarily to support the effects of surgery, chemotherapy, radiotherapy, and hormonal therapy.

THE CHALLENGE

TOXINS & STRESS

TOXINS & STRESS

7

W h y y o u r b o d y c r a v e s a c l e a n s e

In today's world, our bodies are constantly exposed to a multitude of toxins. Toxins are substances that can pose a threat to the cells and tissues within our bodies. They originate from various sources, including our surroundings, dietary choices, and lifestyle factors. Examples of common toxins encompass heavy metals, pesticides, herbicides, insecticides, pollutants, and specific chemicals. Our body relies on natural detoxification mechanisms, primarily executed by the liver, kidneys, lungs, and skin. These vital organs function to process and eliminate toxins from our system. However, if any of these organs become imbalanced, the body faces greater challenges in managing these toxins and even in responding effectively to a carefully selected remedy.

S t r e s s

Chronic stress can have a negative impact on the body's overall health and well-being. Stress can affect sleep patterns, hormone levels, immune function, and digestion. While stress doesn't necessarily introduce toxins into the body, it can influence how efficiently the body's natural detoxification processes work. Chronic stress might compromise the immune system and affect the functioning of organs involved in detoxification, potentially leading to an imbalance.

Instead of focusing solely on extreme detox methods, the priority should lie in revitalizing the functions of the body's organs.

TOXINS & STRESS

8

Our lifestyle is influencing us on a daily basis

Some examples:

- Stress
- Smoking (also during pregnancy)
- Coffee
- Drugs
- Vaccinations
- Fast food
- Bisphenol A (BPA)
- Dioxins
- Perfluoroalkyl and Polyfluoroalkyl Substances (PFAS)
- Phthalates
- Polychlorinated biphenyls (PCB)
- Triclosan
- Herbicides
- Pesticides
- Formaldehyde
- Radiation
- ...

THE OBSTACLE

9

Sometimes, it can happen that an organ or gland gets disrupted due to a particular event. Many times, I have found myself fruitlessly chasing after the similitum, while the solution was right in front of me.

Through studying the French School (more on that later), I gradually came to the conclusion that it doesn't have to be so complicated most of the time.

Why did I let myself be guided by the multitude of symptoms, theoretical thinking models, and so on, only to realize that the solution was right in front of me, but I thought it was too clinical?

THE REMEDY

I'll give an example:

Imagine someone needing to wake up 3-4 times during the night to urinate. What could be the underlying cause? It's generally uncommon for most individuals to experience frequent nighttime urination because their bodies naturally produce an adequate amount of antidiuretic hormone (ADH). This hormone helps reduce urine production at night compared to during the daytime. Now, let's consider a situation where the pituitary gland isn't releasing sufficient ADH. Wouldn't it be logical to explore the potential of using Hypophysinum 4CH as a remedy that is similar in nature. The aim would be to stimulate the pituitary gland, encouraging to release enough ADH. This approach might offer a solution to the problem, addressing the urge to urinate at night. Of course, there might be other contributing factors, but this example highlights a method I've successfully applied several times in my practice.

ORGANOTHERAPY

ORGANO- THERAPY

11

W h a t i s O r g a n o t h e r a p y ?

In Organotherapy, sarcodes are used, which are derived from healthy tissues and contain corrective information for the respective organ, gland, or tissue.

The intention is not to replace a poorly functioning organ, where daily administration of hormones can lead to even more gland degeneration. But sometimes it can be a better solution than medication.

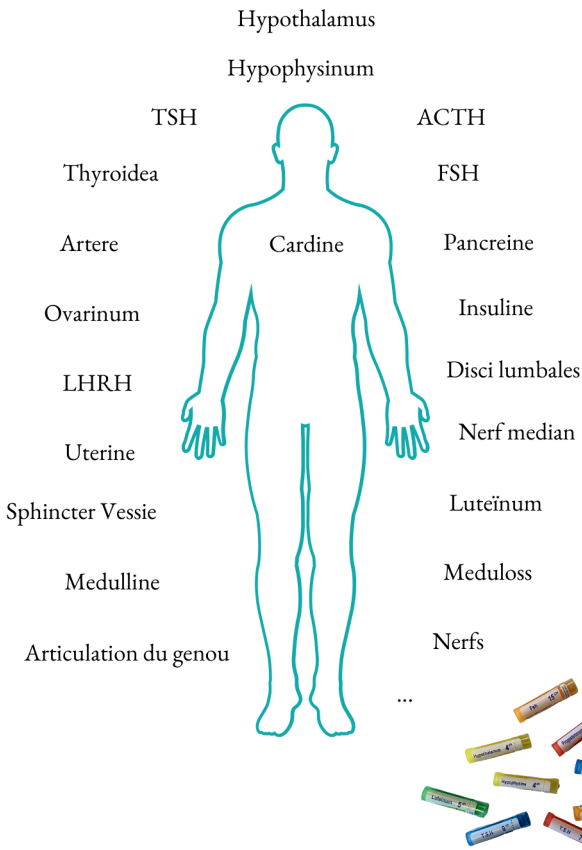

In Organotherapy, our aim is to stimulate the organ, thereby restoring its original balance. It primarily involves the use of healthy tissue and gland extracts.

By administering this homeopathic remedy, we can stimulate, regulate, or even inhibit a gland, for example, achieving the desired effect.

R e m o v i n g o b s t a c l e s

In this book, I will endeavor to document the majority of conditions that occur in everyday practice and where organotherapy can be utilized. The intention is not to treat all cases in this manner, but rather to focus on situations where a sarcode is needed or where one encounters obstacles or seeks alternative approaches to achieve improvement. It serves as a starting point for treatment, and through the obtained results, it instills confidence in homeopathy, allowing further exploration towards finding the ultimate similimum.

Commonly used sarcodes

ORGANO- THERAPY

13

Why Organotherapy?

Nowadays, our bodies are subjected to a lot of stressors, such as endocrine disruptors, herbicides, pesticides, air pollution, and more. These factors naturally have an impact on our endocrine system as well as our other organs. This is where sarcodes come in handy, as they can help revitalize exhausted organs and restore their strength.

Detoxify

There is a growing evidence that these endocrine disruptors can act negatively on the pituitary gland and hypothalamus. So you can imagine that these 2 homeopathic remedies: Hypophysine and Hypothalamus often lead to very good results.

If for example the hypothalamus gland is disturbed, many symptoms can occur because the hypothalamus (and or pituitary gland) controls metabolism, growth, sexual maturation, reproduction, blood pressure and many other vital physical functions and processes. So that's where organotherapy finds its place.

P R E S C R I P T I O N
o f s a r c o d e s

THE WAY TO THE SIMILIMUM

Steps	Removing the obstacles
Step 1	A nosode can open the case and or remove hereditary obstacles
Step 2	A sarcode makes sure the organ will respond in the right way (by stimulation, regulation or inhibition)
Step 3	A drainage remedy is employed to assist the body in gently eliminating the accumulated toxins and waste from every cell and tissue related to that corresponding organ or tissue.
Step 4	The similimum now has a greater chance of working effectively.

THE WAY TO THE SIMILIMUM

21

By prescribing a nosode, sarcode(s), and a drainage remedy, you pave the way for the similimum, the ultimate prescription.

(Of course, this is done only when necessary)

SARCODES

Sarcodes are not so often used in homeopathy: The ones we know are mostly prescribed on the symptomatology. In organotherapy we will use mostly sarcodes like:

- Hypothalamus, Hypophysine, ...
- Thyroidinum, Surrenine, ...
- Nerfs, Nerf median, Nerf auditif, ...
- ACTH, TSH, FSH, LHRH ...
- Ligament genou, Articulation du genou
- ...

DRAINAGE

When our body accumulates a significant number of toxins, it becomes more challenging for the similimum to be effective. Drainage remedies can be beneficial for eliminating toxins that have built up in the body's organs:

- Berberis, Solidago
- Taraxacum, Chelidonium
- ...

NOSODES

Most of us are familiar with prescribing a nosode to open a case (for example), or to alleviate hereditary energy (miasm).

The most common are:

- Psorinum
- Medorrhinum
- Syphilinum
- Carcininum
- Tuberculinum
-

SIMILIMUM

As a similimum, I see the constitutional remedy here, which is often a mineral remedy but not exclusively. The similimum will work better if the body is susceptible to the remedy. This means the body is detoxified (using a drainage remedy), the organs function properly (with a sarcode), and the miasmatic heritage is addressed with a nosode.

INDICATIONS

Brain & Nervous system

29

	Indication	Remedy 4CH or 8DH (unless otherwise stated)
	Nerves (general)	Nerfs
	Algoneurodystrophy (Sudeck's atrophy)	Thalamus
	Alzheimer's disease	Circonvolution de L hippocampe Substance blanche médulaire Surrenine
	Arnold neuralgia (Occipital neuralgia)	Nerf occipal d'arnold
	Anosmia	Nerf olfactif
	Carpal tunnel syndrome	Nerf median
	Cerebral asthenia	Cerebrinum Surrenine
	Chronic or idiopathic pain	Thalamus
	Chronic fatigue syndrome CFS (Myalgic encephalomyelitis, ME)	Surrenine alternating with Dopamine every night
	Coordination problems in skeletal muscle	Cerebrinum 4CH or 7CH

INDICATIONS

Brain & Nervous system

30

	Indication	Remedy 4CH or 8DH (unless otherwise stated)
	Degenerative disorders (general): Parkinson's, mental inertia, male impotence, with decreased sexual desire and absence of orgasm, in cases of painful intercourse with premature ejaculation, in cases of female frigidity, menopausal disorders with hot flushes	Thalamus
	Depression	Hypotalamus 7CH, Cerebrinum 7CH
	Dizziness and tremors of cerebellar origin	Cerebellum 4CH or 7CH
	Dizziness and hearing loss	Nerf auditif
	Facial paralysis	Nerf facial
	Fibromyalgia	Circonvolution hippocampe morning Cortex cerebral morning Thalamus morning (Alternate these remedies)
	Hemiplegia	Cortex Cerebral (once a day) Medulline alternate with Nerf moteur & Artere cerebrale
	Imbalance between right & left	Cerebrinum 7CH

INDICATIONS

Brain & Nervous system

31

	Indication	Remedy 4CH or 8DH (unless otherwise stated)
	Insomnia	Bulbinum 9CH (1hour before going to sleep)
	Intercostal neuralgia	Nerf optique
	Memory loss in the elderly after a CVA (cerebrovascular accident)	Tissu Capillaire
	MS (Multiple sclerosis)	Nerfs Circonvolution de L hippocampe Substance blanche médulaire Surrenine Moelle cervicale
	Neurasthenia	Bulbinum (medulla oblongata)
	Nerve disorders after viral infection: herpes zoster, ...	Nerfs
	Neuropathy (general)	Nerfs
	Neuropathy (peripheral) after chemotherapy: Certain chemotherapy treatments can cause damage to the peripheral nervous system, which include all nerves outside the brain and spinal cord, which commonly causes tingling, burning, weakness or numbness in the hands and/or feet.	Nerfs 4CH followed by Nerfs 5CH

INDICATIONS

Brain & Nervous system

32

	Indication	Remedy 4CH or 8DH (unless otherwise stated)
	Parasympathetic nervous system (disorders of): Tachycardia, Slow digestion, too little saliva, ...	Nerfs parasympathique
	Parkinson	Dopamine (Every evening) Cortex cerebral (Every evening) Artere cerebrale (Every other day) Mesencephale (Every other day) Thalamus (once a day)
	Recurrent and prolonged neuralgia	Thalamus
	Sensitivity and visual disturbances	Nerf optique
	Shingles aftermath (Post-herpetic neuralgia)	Nerf optique
	Spasmophilia	Axe cortico hypothalamique 7CH Rhinencephale 7CH of 14DH (Alternate every night)
	Tetany and spasmophilic states	Hypothalamus 7CH Parathyroidinum 7CH (Alternate every night)
	Toxic neuropathy (eg: alcohol)	Nerf optique
	Transmission of nerve impulses	Medulline
